

Letter from Executive Director

For Partners for Clean Streams, 2021 was a year of adaptation and renewal. Each of our public programs saw returning and growing volunteer numbers, some in big ways and some in small ways.

Clean Your Streams 365 grew from twenty-seven clean-ups in 2020 to sixty-two clean-ups in 2021. Many volunteers adapted to new technology and embraced the option to clean on-their-own using the Clean Swell app to record data. In addition, PCS staff modified public clean-ups to include COVID precautions, so we were also able to offer more frequent staff-led clean-ups.

Thanks to high water levels on the Maumee River for most of the summer, Get the Lead Out also got the chance to grow through adaptation. We had the opportunity to remove fishing line, lures, and link sinkers from sites that our volunteers don't often tackle, including Otsego Park and Weirs Rapids Wildlife Area, in addition to old favorites like Blue Grass Island. In 2020, PCS staff hosted only one Get the Lead Out program, but in 2021, we were able to host five.

We were especially happy to bring back the Clean Your Streams volunteer appreciation picnic so we could celebrate the 25th Annual Clean Your Streams Day in-person together. As we've grown more accustomed to hybridizing online and in-person program offerings (even our Annual General Meeting was hybridized this year!), we're able to offer opportunities that include more people while prioritizing everyone's safety.

And that's only our programs! 2021 also brought plenty of new projects, public outreach opportunities, and collaboration partners. PCS has always been an organization with plenty going on behind the scenes, so read on to learn more about what we got up to this year.

Just like nature and the rivers we love, we are always adapting and evolving!

Programs – Marine Debris Removal

- This program runs throughout the year. Volunteers choose a time and location to remove marine debris throughout North West Ohio waterways.
- Clean-ups can be PCS staff-led or go-on-your-own.
- This program has grown steadily in recent years, thanks in large part to participants using the Clean Swell app to track their trash data.
- In 2021, PCS partnered with Metroparks Toledo for three paddle cleanups, where volunteers used canoes or kayaks to reach otherwise inaccessible marine debris.

Clean Your Streams 365 Highlight:

Buttonwood Stewardship by Molly Strader

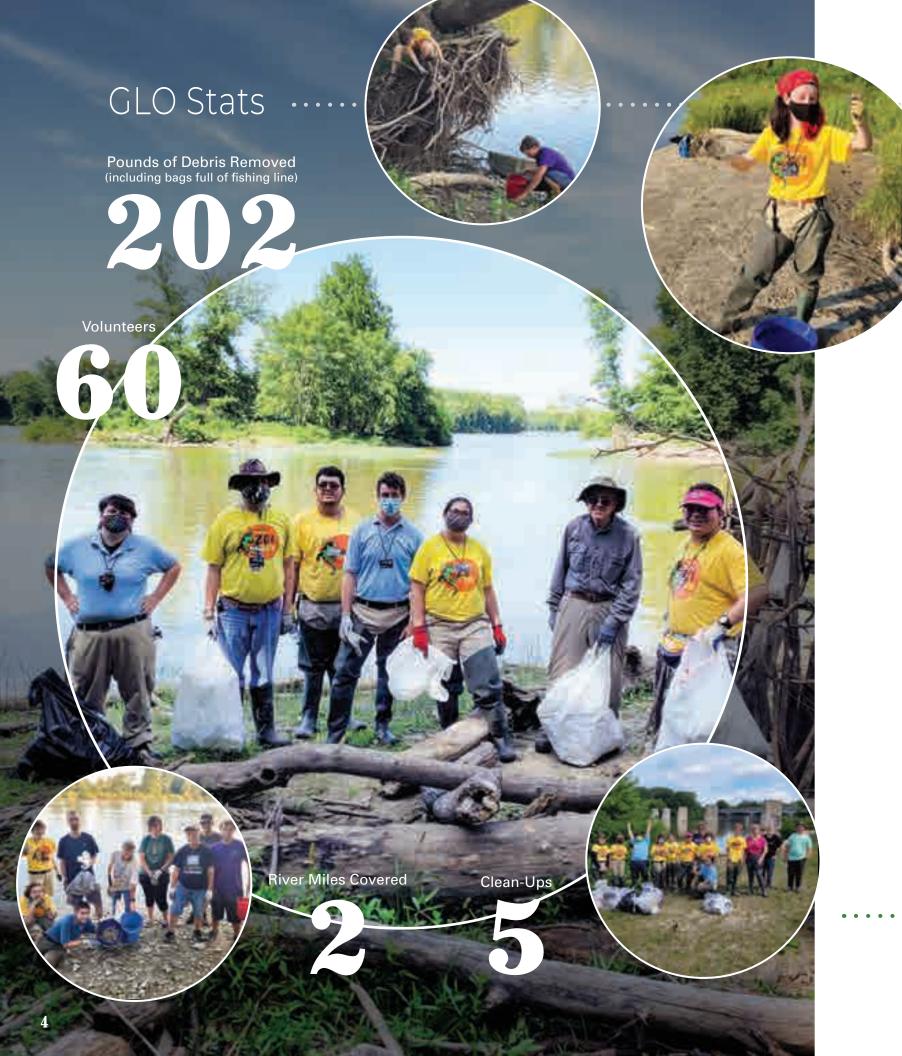

One volunteer stood out this year with her many Clean Swell app entries. **Molly Strader** first learned about Partners for Clean Streams at a public CYS 365 event hosted by the Perrysburg Country Garden Club. Molly downloaded Clean Swell and began recording marine debris data when she visited her local park: Buttonwood. Buttonwood is a small

recreation area managed by the Wood County Park District on the south shore of the Maumee River. Between April and October of this year, Molly recorded eleven clean-up entries in Clean Swell, showing she removed 85 pounds of trash! Her top three items were cigarette butts (131), plastic pieces (42), and food wrappers (38).

Why does Molly clean up Buttonwood? In her words, "I do it out of the love of the park and keeping our rivers and waters free of debris for the health and well-being of the wildlife." Molly's stewardship provides an outstanding example of the positive difference just one person can make on their local environment.

If you regularly pick up trash from your local ditch, creek, or stream, consider downloading Clean Swell and recording data on what you find. PCS would love to learn about your efforts and highlight you, next!

Jear of Jear of Get the Lead

These clean-ups focus on fishing line, lures, hooks, and lead sinkers in the Maumee River.

Programs are held throughout the summer when Maumee River water levels are (ideally!) lower. This year, water levels stayed unusually high. To compensate for lack of access to Blue Grass Island for most of the season, PCS staff led clean-ups at sites we don't always tackle, like Otsego Park and Weirs Rapids Fishing Access.

Sites Cleaned

Pounds of Debris Removed

,176

This year was the silver anniversary of Northwest Ohio's largest watershed clean-up! We were glad to bring back bigger in-person clean-up kickoffs and to be able to celebrate twenty-five years of Clean Your Streams together at the volunteer appreciation picnic.

2021 saw the return of our "remote/virtual kickoff" during the week leading up to Clean Your Streams Day. Participants had the option to register to clean a waterway at a time and location of their choosing to ensure that Clean Your Streams could be accessible to a wider group of volunteers.

Reel In and Recycle

Total number of bins in use around Northwest Ohio:

36

Fishing line recycling bins encourage anglers to responsibly recreate along our rivers by properly disposing of line.

Regional partners install fishing line recycling bins, including Metroparks Toledo, Wood County Park District, and others. Volunteers have the option to "adopt" a bin by agreeing to clean and maintain it.

Bins can also be financially sponsored by individuals, organizations, or corporations!

6 new bins installed this year:

· Ft. Miamis' Corey St. Boat Launch (1)

· W.W. Knight Preserve (1)

· Olander Park (4)

Thank you to our 2021 fishing line recycling bin sponsors: Fallen Timbers Trout Unlimited, First Energy Foundation, Merickel-Farley Trout Club.

and preventing marine debris from entering the Ottawa River.

Our volunteers and staff helped coordinate recycling and waste management across race weekend, diverting hundreds of pounds of plastic bottles, cardboard, glass, and alumi-

Health Glass City Marathon race weekend.

We focused on diverting waste from landfills

num and ensuring that these did not end up in our waterways.

Projects

City of Toledo Trash Trappers

Beginning in 2021, the City of Toledo is leading "Trash Trappers" through the EPA's Trash Free Waters grant to install trash capture devices in area waterways.

One one of several community organizations providing education, we hosted volunteer clean-ups to raise awareness about these devices.

We designed seven educational postcards to teach about the impact of marine debris on our waterways, and the purpose and benefits of each trash trap device.

We facilitated three clean-ups in the Trash Trappers' focus area within five miles of Lake Erie.

Maumee River Floating Laboratory on Watershed Science

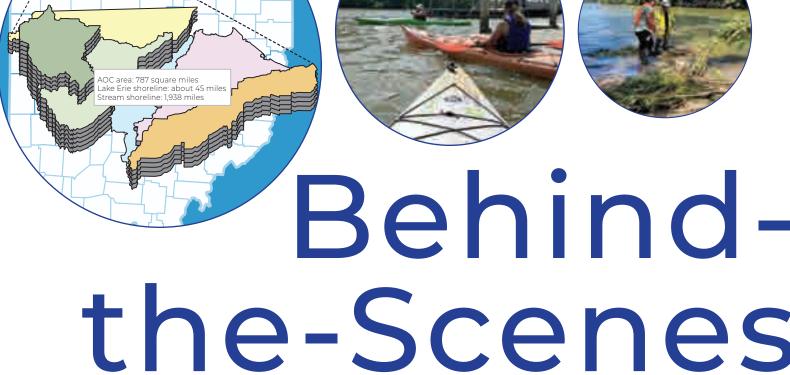

Better known as Maumee River F.L.O.W.S., the University of Toledo's Lake Erie Center was awarded a NOAA B-WET grant for outdoor, hands-on environmental science.

Alongside other organizations, we supported five science cruises for students aboard the Sandpiper. Students studied water samples and macroinvertebrates in the sediment and water. We talked about the impact of marine debris in water and on wildlife, and what we can do tackle this problem.

Teachers then lead four Storm Drain Marking workshops and two Clean Your Streams 365 clean-ups with our supplies and instruction.

Maumee AOC Metrics

Since 2007, PCS has been designated as the local facilitating organization for the Maumee Area of Concern (AOC) and coordinates the Maumee Area of Concern Advisory Committee (MAAC).

The U.S.-Canada Great Lakes Water Quality Agreement defines AOCs as "geographic areas [...] where significant impairment of beneficial uses has occurred as a result of human activities at the local level." In short, an AOC is a place that has experienced environmental harm, and where organizations are stepping in to help!

Beneficial use impairments, or BUIs, are specific types of environmental harm. Some example BUIs include "loss of fish and wildlife habitat," "beach closings," and "eutrophication or undesirable algae." The Great Lakes Water Quality Agreement lists 14 types of BUIs.

The MAAC works through partnerships and planning to find and develop fundable projects that lead to removing BUIs from the Maumee AOC. The MAAC also assists partners with project implementation, and raises awareness of AOC issues within the community.

Additionally, PCS's many marine debris removal and prevention programs help address BUI 11, the degradation of aesthetics.

2021 Donors

To protect privacy, we choose not to list individual donations, but we are grateful to all the people who support our mission of clean, clear, and safe water. Your generosity shows us that our community cares about water quality and we will use your gifts considerately to ensure that we can make the most impact with them. 100% of our Board members make a financial contribution each year

Grants

- Anonymous Foundation
- Greater Toledo Community Foundation
- NOAA Bay Watershed Education and Training (BWET), through UT subaward

- Republic Services

This award was created by the PCS Board of Directors in 2007 to honor exceptional individuals and/or organizations in our community that work to improve our rivers and streams.

Past Winners:

2007 - Sue Horvath

2008 - John Jaeger

2009 - Marilyn DuFour

2010 - Tom Henry

2011 - Steve Pollick & Matt Horvat

2012 - Terry Shankland

2013 - Cherie Blair

2014 - Kurt Erichsen

2015 - Bob Neubert

2016 - Todd Crail

2017 - Dr. Patrick Lawrence

2018 - Bill Davis

2019 - Denise Fonner & Joan King

2020 - Randy Nissen

Annual Award

for Environmental

Stewardship and

Involvement

This year, the Board of Directors congratulates Jamie Kochensparger!

Jamie has served as Education Specialist of the Lucas Soil & Water Conservation District (SWCD) since 2003, providing environmental programs for students of all ages: preschool to senior centers! Jamie's career has touched watersheds at every phase, from her roots as a Naturalist/Ranger to creating a Junior Watershed Academy curriculum.

In her current role with Lucas SWCD she has increased annual programs offered and reaches thousands of Lucas County residents with her conservation and natural resource education programs. She was named Outstanding Area 1 Soil & Water District Employee in 2007.

Jamie has partnered with the Maumee RAP and PCS on a number of educational initiatives including Give Water A Hand, the Clean Streams Patch Day Program, and Water Quality Cruises. Thank you, Jamie, for your decades of education about our waterways!
